WORK EXPERIENCE

Sr. Software Engineer

PedidosYa 01/2022 - In Progress Remote

PedidosYa is the leading delivery and quick commerce technology company in LATAM. It has been part of Delivery Hero since 2014.

- I'm the core maintainer of all our front-end applications, creating reusable libraries inside our Monorepo. I'm the creator of this one.
- I actively participate in almost every Product initiative, even if I don't implement it I still design the technical solutions.
- I have a career plan where I made improvements to our tech stack: Reducing the complexity by eliminating backend services. Increasing our quality code and workflow. Increasing our quality user-activity tracking.

Frontend Lead Engineer

Riqra 07/2020 - 01/2022 Remote

Riqra is building an e-commerce suite dedicated to digitize the B2B sales in LATAM.

- I was the core maintainer for all the frontend applications, leading structural changes in our architecture. #Leadership
- I developed integrations with national and international payment systems. #Payments
- I started the E2E testing initiative for the Storefront. #Testing

Backend Node.js Engineer

VISA - VendeMás 03/2020 - 06/2020 Remote

VendeMás provides technologies for middle-entry-level merchants, so they can accept payments with all the credit cards.

- I developed microservices using Apache Kafka and RabbitMQ for one main project of e-billing along with Close2U technology. #Backend
- I used TDD to develop high-level quality software, also good and modern software practices. #Testing
- I contributed to one C++ project about the encryption system used by mobile devices. #Security

Full Stack Node.js Developer

Riqra 02/2018 - 08/2019 Lima - Perú

Riqra is building an e-commerce suite dedicated to digitize the B2B sales in LATAM.

- I implemented the most recent version of the e-commerce platform, supporting different features for different customers in LATAM. #SaaS
- I contributed to the GraphQL API. ~300 deploys to production. #Backend
- I was the creator of the Hyperbola project, the integration server based on data flows. #Innovation
- I was the core maintainer of Truck, the React UI components library. ~100 components built from scratch. #DesignSystem

INTRODUCTION

Software Developer with +7 years of experience working on the frontend and backend side. I've worked with many technologies over the past years, now focused on the Web with Node.js, React, TypeScript, and GraphQL.

EDUCATION

Computer Systems Engineering

Universidad Privada del Norte

03/2013 - 12/2017

San Isidro, Trujillo, La Libertad, Perú

- In the field of Software Engineering
- Competitive programming community Leader – ACM-ICPC Contestant
- I took CS courses like data structure, algorithms design & compilers
- I enjoyed learning programming basics from my masters. C++ & Python rocks!
